SUMMARY

1 years exposure in JavaScript technology such as React JS, Typescript.

2+ years of professional exposure to HTML, CSS, and Photoshop.

Experience with Babel+ES6 and WebPack for Single Page Application development.

Experience working in remotely and with a large development team comprising of back end and front-end developers, and working on features with multiple people at a time.

Experience with the version controls GIT, GITHUB, Package manager NPM, Bower.

PROJECTS

REALHOUSEY

[Source Code](#) [Try it out](#)

- Planned, developed, tested, deployed web application and features
- Implementing new React features such as context API for our state management, hooks
- Designing **prototypes** and **high fidelity mockups** based on specifications
- Writing cross-browser and **responsive CSS/SASS** & React web application

Info: realHousey is a way to find the best properties who are searching for properties and for finding the real state agents that can help people with there needs. Implemented the search filter feature. Depending on the search filter It's going to dynamically render the list of houses from the database.

SPAPSHOOT

[Source Code](#) [Try it out](#)

- Planned, developed, tested, deployed the web application and feature
- Implementing Third-party API such as unsplash API to the front end.
- Designing **prototypes** and **high fidelity mockups** based on specifications
- Writing cross-browser and **responsive CSS/SASS, GSAP** & React web application

Info: Spapshoot is a tool for searching and downloading(medium quality) free photos on the internet. This project uses unsplash API to the front end. The front-end is completed in react and GSAP. GSAP - which handles complex animations. This is developed with mobile responsiveness in mind. All design and development from start to finish was done by myself.

VEPLOP

[Source Code](#) [Try it out](#)

- Planned, developed, tested, deployed the web application and feature
- Implementing youtube API to assess the video lists thought the database.
- Designing **prototypes** and **high fidelity mockups** based on specifications
- Writing cross-browser and **responsive CSS/SASS**, & React web application

Info: velop is a way to watch youtube videos in a costume background changer interface to enhance the experience. This project uses youtube API to assess the video lists thought the database. People can search anything and it will take the input to the search parameters by using this it will conect to the youtube server and send back the videos.

You can see the YouTube API documentation: <https://developers.google.com/youtube/v3/docs>

WORK EXPERIENCE

FREELANCE | WEB DESIGNER & DEVELOPER

06/2017 TO CURRENT

- Planned, developed, tested, deployed web applications and features
- Effectively translated client requirements into application designs and system requirements
- **3 years UX/UI & HTML/CSS**
- Creating logos, banners and buttons for websites
- Created React JS reusable components (multi-field form elements). background file uploads.
- Extensively used GIT for version controlling and regularly pushed the code to GitHub
- Developed cross - browser/platform HTML 4/5, CSS 3, and JavaScript to match design specs for complex page layouts while adhering to code standards.
- Developed HTML prototype and UI deliverable such as wireframes, screen mock-ups and interface design.
